

BTS-004 | Business Transformation Story

Intelligent Supply Planning for Process Manufacturing

*Optimizing Production, Inventory, and Capacity Through
Connected Supply Planning*

01 | Industry: Process Manufacturing

Process manufacturing demands precise control over batch formulas, shelf-life limits, and production campaigns against shifting demand. While Oracle E-Business Suite reliably handles execution and transactions, scaling efficiency requires advanced supply planning capable of resolving complex operational constraints simultaneously.

02 | The Business Opportunity

- Synchronizing production with changing demand
- Balancing inventory across raw materials, intermediates, and finished goods
- Managing production capacity across multiple manufacturing facilities
- Improving production utilization through intelligent supply recommendations

The objective: Build an integrated supply planning process capable of balancing demand, inventory, manufacturing capacity, and procurement through one connected planning environment.

03 | Recommended Planning Approach

Oracle Supply Planning Cloud, integrated with Oracle E-Business Suite, provides a centralized planning platform that transforms demand into executable supply recommendations while considering operational realities across the manufacturing network.

Business Requirement	Oracle Supply Planning Cloud
Supply Planning	Constrained & Unconstrained Planning
Production Planning	Planned Production Orders
Procurement Planning	Planned Purchase Orders
Distribution Planning	Planned Transfer Orders
Capacity Planning	Resource & Production Constraints
Inventory Planning	Multi-Echelon Inventory Visibility
Exception Management	Planner Workbench & Action Messages
Scenario Analysis	Multiple Supply Plans & Simulations

04 | Business Value Delivered

Organizations adopting this phased planning strategy can expect:

- Improved production planning
- Better manufacturing resource utilization
- Reduced material shortages
- Optimized inventory investment
- Increased production visibility
- Faster planner decision-making
- Better synchronization between procurement and manufacturing
- Improved customer service through reliable supply commitments
- Greater supply chain resilience
